

Wakiso, Uganda. Save the Children (2016)

This dataset includes data from 504 children in Wakiso region of Uganda, collected in May 2016. The data were collected as the baseline of a quasi-experimental impact evaluation examining the effectiveness of a preschool program for children living in the area. The average age of children was 4.6 years.

Average learning and development scores in IDELA domains

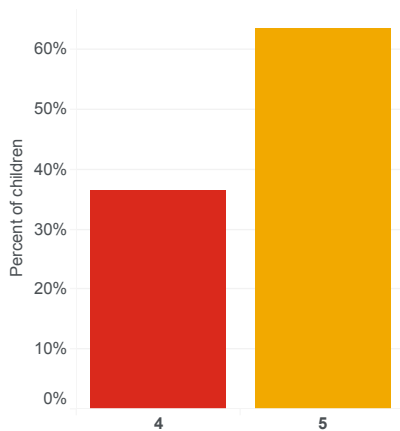

Distribution of Total IDELA scores

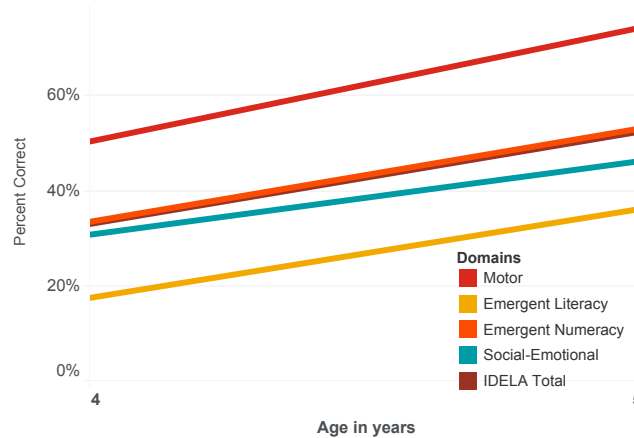

On average, children scored 46% correct on the IDELA assessment. The most common score for children was between 41-50%, and scores were normally distributed across the sample.

Distribution of children's ages

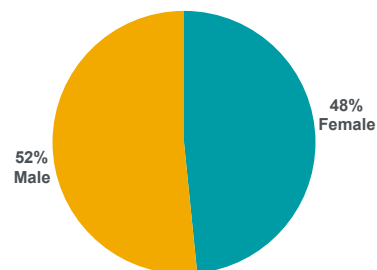

Average IDELA scores by child's age

Children in the sample were 4 - 5 years old, with an average age of 4.6 years. Age was significantly associated with IDELA scores, and on average, one additional year was associated with an additional 18 percentage points correct in overall IDELA score.

Distribution of children's gender

48% of children in the sample were female. We observe no significant differences in IDELA scores by gender.
