

Za'atari and Azraq Camps, Jordan. Save the Children (2016)

This dataset includes data from 271 children living in Za'atari and Azraq Camps in Jordan. The data were collected as part of program monitoring efforts for preschool programs being implemented in the camps. The average age of children was 4.5 years.

Average learning and development scores in IDELA domains

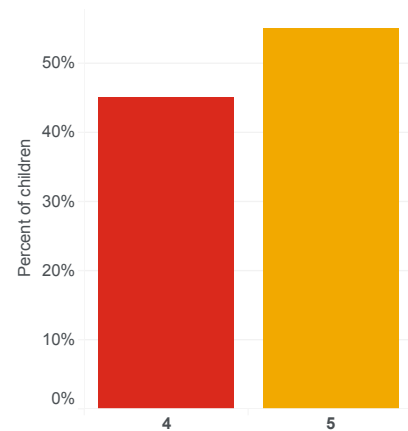

Distribution of Total IDELA scores

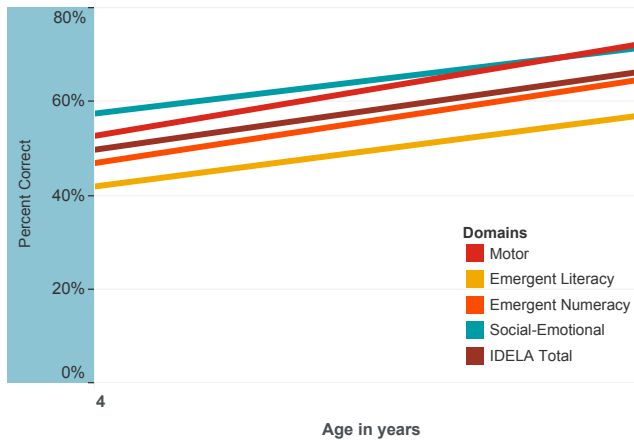

On average, children scored 59% correct on the IDELA assessment. There was a large range in children's skills but the most common score was 61-70% correct.

Distribution of children's ages

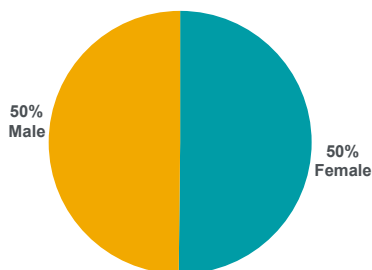

Average IDELA scores by child's age

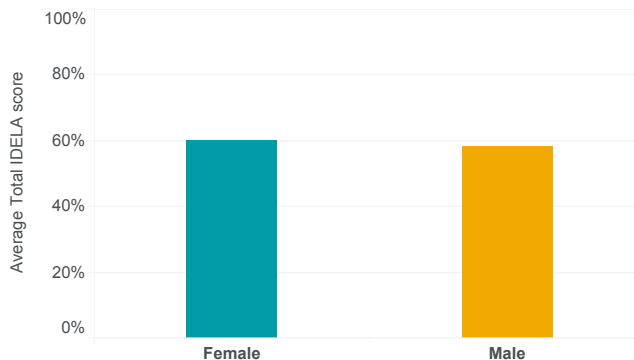

Children in the sample were 4 - 5 years old, with an average age of 4.5 years. Age was significantly positively related to the total IDELA score. On average, one additional year was associated with an additional 18 percentage points correct in total IDELA score.

Distribution of children's gender

Average Total IDELA score by child's gender

50% of children in the sample were female. Girls scored significantly higher than boys on the overall IDELA score.
